

## Towards awareness & action for people living with neurological conditions worldwide

OneNeurology is the only global partnership where patients, clinicians, and researchers come together to advocate for neurological conditions

**AS ONE**

### Teaming up to drive change more quickly

Neurological conditions are the largest single cause of disability worldwide, leading to the highest costs to society.

Neurological conditions must be prioritized, globally and within the context of brain health.

As a partnership, we can drive change more quickly than if we only work as individual organisations.

### Raising awareness and enabling changemakers

We unite to raise awareness of the impact of neurological conditions, the challenges to overcome, and the opportunities to optimize brain health for everyone.

Leveraging the Global Action Plan on epilepsy and other neurological disorders, we encourage patient advocates around the world to drive change.

Policy-makers appreciate that we are a one-stop-shop, offering expertise needed to support action.

### United for neurological health

Our vision is that neurological health is valued and protected as our most vital asset, to the benefit of all society.
